In our
60 YEARS
of operation

Our system deployments include
FEDERAL AGENCIES, MILITARY, & PUBLIC SAFETY
In every region of the
WORLD

Codan keeps working
IN NATURAL DISASTERS & CATASTROPHIC CLIMATES

Our products have the
HIGHEST RELIABILITY
from
RURAL AREAS
to
MULTINATIONAL REGIONS

Our largest deployment covered
20,000 UNITS
across
MULTIPLE COUNTRIES

OUR PROCESS

Solving challenging requirements is what we do best

ASSESS
Our solution consultants conduct a detailed assessment of:
- Existing infrastructure
- Operational environment
- Opportunities and challenges
- Stakeholder needs
- Budget and existing investments

DESIGN
Our consultants design a custom solution for those challenges, using the right technology from Codan or one of our partners.

DEPLOY
Wherever you are, our specialists get your system up and running quickly.

TRAIN
Our consultants are here to train your operators and staff on the technology – to maximize easy-to-use systems and interfaces.

SUPPORT
Whether we're out in the field with you, or in our support center, we're always on hand for any advice you require.

CHALLENGING REQUIREMENTS?
NO PROBLEM

When you are focused on protecting your country and the safety of its people, the last thing you need to worry about is your radio communications.

We hear you.

OUR CLIENTS TELL US THEY NEED…	AND THAT'S WHY OUR SOLUTIONS DELIVER…
✓ To provide secure, complete communication solutions to protect and support unified communications	✓ A full end-to-end P25 encrypted technology suite for high security solutions
✓ To make communication deployment simple and easily accessible in an emergency	✓ Rapid, compact, and transportable solutions
✓ To easily integrate new feature-rich technology with legacy equipment, such as v.24 city, county and state networks	✓ Open standard P25 DFSI IP-based connectivity
✓ Proven reliable technology	✓ Systems built to deploy in all-weather environment
✓ System design, implementation and support	✓ Experienced engineering design, full turn-key solutions and 24 hour on-site support

TACTICAL LTE AND SATELLITE INTEGRATION

P25 DFSI NETWORKED SOLUTIONS

Protective Missions

IP CAPABLE FIXED INFRASTRUCTURE

Codan provides custom engineered conventional and trunked IP-Networked solutions based on our reliable infrastructure that are easily scalable and are backed by full end-to-end support. These solutions can improve critical communications in challenging terrain while maintaining a manageable user experience, or manage traffic for large numbers of users in scenarios such as special events or disaster deployments.
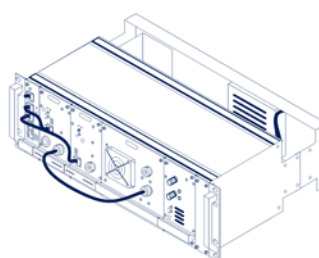

TACTICAL LTE AND SATELLITE INTEGRATION

Codan's Stratus family of tactical repeaters and base stations leverage the reliability and ubiquity of cellular infrastructure and the universality of the P25 DFSI IP open Standard. The result is groundbreaking solution that delivers the traditional LMR experience that users know and trust, while providing on-the-fly backhaul to consoles located virtually anywhere in the world.

For more remote or connection-critical applications, custom satellite backhaul integration can be used to establish console or communications network connectivity if the LTE network fails or is out of reach.

P25 DFSI NETWORKED SOLUTIONS

Codan specializes in products and solutions that promote interoperability and vendor neutrality by utilizing the P25 Standard, while pushing the boundaries of what can be achieved. IP-Capable Codan products can be connected together via the P25 DFSI IP Protocol, establishing a network of tactical infrastructure capable of smart routing and control via our Stratus fixed or tactical controller.

All networked applications support end-to-end encryption, and Key Management Facility (KMF) integration provides solutions for keeping field unit encryption up-to-date.
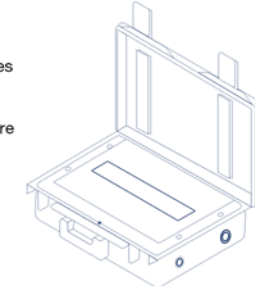

LEGACY NETWORK INTEGRATION

The Codan Cyclone is a drop-in replacement for the legacy third party products that supports the v.24 interface with existing conventional core radio repeaters and base stations. Full native support for the P25 DFSI interface also allow for gradual transition to a standards-based network and backhaul over Ethernet, modernizing your agency's communications and reducing the need for costly leased lines and T1 connections.
